

GuideControl

Intelligent Light Guide Cable Tester

The only **intelligent light guide cable tester** that ensures the quality of your light guide cables and **fits all brands and types**.

3 Parameter test

GuideControl tests Light Transmission, Intact Fiber Density and Colour Correctness of the transmitted light.

Universal Compatibility

Using its spring loaded connectors and automatic diameter detection, GuideControl tests any type & brand.

10 Second Test

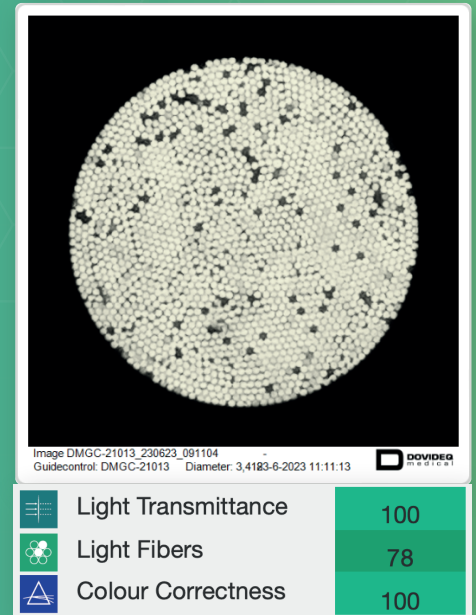

Everything you need to know about your cables in 10 seconds

The only IFU Compliant Tester

Most major OEMs specify a minimum level of intact fibers for safe cable re-use. GuideControl removes the guesswork with a precise, camera-based assessment of your Fiber Bundle Density, so you can ensure every cable meets manufacturer standards before it returns to the OR.

Beyond fiber integrity, GuideControl also measures Light Transmission and Color Correctness, helping you quickly identify underperforming cables and maintain consistent optical quality where it matters most.

Easy Operation

GuideControl uses 2 spring loaded, universal connectors. Just press and hold both ends of your cables for 10 seconds. **No adapters needed.**

Perfect Illumination

With GuideControl, you know every cable sent to the OR is in good shape, ready for use. **No more bad cables in the OR.**

Data Storage

GuideControl can store test data in our cloud platform EndoscopeManager, a USB drive or print out test results via a label printer.
